

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

1                   1.       (Currently amended) A method for providing access to an information  
2 stream comprising:  
3                   obtaining a plurality of timestamps, each timestamp comprising an associated  
4 event marker and an associated time index referenced with respect to a time line of the  
5 information stream, wherein two or more timestamps can be associated with the same event  
6 marker;  
7                   producing segments of the information stream, each segment being associated  
8 with a timestamp and being determined based on the time index associated with the timestamp;  
9                   forming groups of segments, each group comprising those segments of the  
10 information stream whose timestamps ~~are associated~~ comprise the same event marker; and  
11                   presenting a representation of each event marker and a representation of its  
12 associated group of segments, wherein the representation is arranged according to an  
13 arrangement format.

1                   2.       (Original) The method of claim 1 wherein the arrangement format is  
2 determined automatically, absent user-provided arrangement information.

1                   3.       (Original) The method of claim 1 wherein each of the event markers is  
2 uniquely represented on a sheet, wherein the arrangement format is determined according to an  
3 arrangement of the event markers on the sheet.

1                   4.       (Original) The method of claim 1 wherein each event marker is  
2 information produced by a user action and each associated time index is the time of occurrence  
3 of the user action.

1                   5.       (Original) The method of claim 4 wherein the user action is scanning of a  
2 barcode, wherein the marker is representative of the barcode that is scanned, wherein scanning  
3 the barcode more than once produces one or more time indices associated with the barcode.

1                   6.       (Original) The method of claim 4 wherein the user action is speaking a  
2 phrase, wherein the event marker is representative of a digital representation of the phrase,  
3 wherein speaking the phrase more than once produces one or more time indices associated with  
4 the digital representation of the phrase.

1                   7.       (Original) The method of claim 4 wherein the user action is a selecting a  
2 visual element with an input device, wherein the event marker is representative of the visual  
3 element, wherein selecting the visual element more than once produces one or more time indices  
4 associated with the visual element.

1                   8.       (Original) The method of claim 1 wherein each timestamp is further  
2 associated with a recording device, wherein the method is applied only to those timestamps that  
3 are associated with the same recording device.

1                   9.       (Original) The method of claim 1 wherein a segment of the information  
2 stream spans a period of time relative to an associated time index.

1                   10.      (Original) The method of claim 1 further comprising recording the  
2 information stream, wherein the timestamps are recorded at the time of recording of the  
3 information stream.

1                   11.      (Original) The method of claim 1 wherein the information stream is a  
2 previous recording, the method further comprising recording the timestamps during playback of  
3 the information stream.

1                   12.      (Currently amended) The method of claim 1 wherein the information  
2 stream comprises one of continuous information[[.]] and discrete information.

1                   13.     (Original) The method of claim 1 wherein the step of presenting includes  
2     producing images on a display device.

1                   14.     (Original) The method of claim 1 wherein the step of presenting includes  
2     producing images on a printable medium.

1                   15.     (Currently amended) A method for providing access to an information  
2     stream comprising:

3                   obtaining a plurality of timestamps, each timestamp comprising an associated  
4     event marker and an associated time index referenced with respect to a time line of the  
5     information stream, wherein two or more timestamps can be associated with the same event  
6     marker;

7                   producing segments of the information stream, each segment being associated  
8     with a timestamp and being determined based on the time index associated with the timestamp;

9                   forming groups of segments, each group comprising those segments of the  
10    information stream whose timestamps ~~are associated~~ comprise the same event marker;

11                  receiving a source image comprising images of the event markers and annotative  
12    information proximate each event marker;

13                  for each event marker contained in the source image, presenting a plurality of  
14    images including an image of the event marker, an image representative of the group of segments  
15    associated with the event marker~~[[;]]~~, and an image of the annotative information proximate the  
16    event marker, wherein the plurality of images are grouped together.

16-34. (Canceled)

1                   35.     (Original) A processor for providing access to an information stream  
2     comprising a data processing component operable to perform the method steps of:  
3                   receiving at least a first information stream;  
4                   receiving a plurality of first event markers, the first event markers having timing  
5     information associated therewith;  
6                   timestamping the first information stream with the first event markers, including  
7     identifying points in time in the first information stream based on the timing information  
8     associated with the event markers and associating the points in time in the first information  
9     stream with the first event markers;  
10                  grouping together those points in time in the first information stream that are  
11     timestamped with the same event marker to produce one or more groups of media segments; and  
12                  presenting the groups of media segments.

1                   36.     (Original) The processor of claim 35 wherein the first event markers  
2     further have device information associated therewith, the device information being indicative of  
3     the device which produced the first information stream, wherein the step of grouping is  
4     performed on those the first event markers that are associated with the same device information.

1                   37.     (Original) The processor of claim 35 wherein presenting the groups of  
2     media segments comprises, for each group of media segments, producing an image  
3     representative of each media segment and forming the image on a printable medium.

1                   38.     (Original) The processor of claim 35 wherein the event markers are  
2     representative of scanned barcodes.

1                   39.     (Original) The processor of claim 35 wherein the event markers are  
2     representative of selected graphics.

1                   40.     (Original) The processor of claim 35 wherein the event markers are  
2     representative of spoken phrases.

- 1                   41.     (Currently amended) A method for accessing an information stream  
2 comprising:  
3                   detecting a first action of reading a marker;  
4                   storing first information representative of the marker;  
5                   associating a first time value with the first information, the first time value  
6 representative of the time of the first action;  
7                   detecting a second action of reading the marker;  
8                   associating a second time value with the first information, the second time value  
9 representative of the time of the second action;  
10                  accessing a first segment of an information stream, the first segment being based  
11 on the first time value; [[and]]  
12                  accessing a second segment of the information stream, the second segment being  
13 based on the second time value;  
14                  presenting the first segment and the second segment along with the marker.
42.     (Canceled)
